TRANZ Q61

Electrical Insulating, Hydrophobic, Weather-Resistant, Clear Coating - Sprayable/Paintable

PERFORMANCE AREA

Protection of wood, plastic, metal assets exposed to the weather. Pollution Flashover Prevention & Auxiliary Resistance on hardware HT gear. Sealing of Wood & Fibreglass Pole Crossarms

The TRANZ Q61 Clear Coating is designed to coat and seal assets exposed to the weather and to serve for very long periods. Unique and specifically developed to combat insulation degradation under the widest range of severe service conditions it is possible to encounter with a proven durability of years of service in these differing environments.

TRANZ Q61 was designed with economics of application in mind, is easily applied by spraying/brush painting techniques and requires minimum maintenance. It is suitable for use on power-line cross-arms, and hardware, transformer hardware and switchgear.

PRODUCT DEVELOPMENT

When all relevant costs are considered the TRANZ Q61 product is an easy economical way to lengthen the service life of many assets that serve out in the weather 24/7/52.

Protective Insulating Coating, air drying, paintlike, brushable, high insulation value, highly hydrophobic

TRANZ Hydrophobic Encapsulating Spray Coat
